1.0 INTRODUCTION

This closure documentation and report presents the investigation findings and closure observations of Charter Oak Environmental Services, Inc. (Charter Oak) for the former Metal Hydroxide / Sulfide Sludge Storage Area (Area E) at the former MacDermid facility at 526 Huntingdon Avenue, Waterbury, Connecticut (“the site”).

Closure was completed in accordance with the Stewardship Permit dated September 28, 2007 for the Site. Any departures from the Closure Plan are described in Section 7.0. The Stewardship Permit number is DEP/HWM/CS-151-001 and the EPA identification number for the Site is CTD001164599. Section II.A of the Stewardship Permit contains the RCRA closure requirements applicable to Area E. This section requires closure of the Site in accordance with the *Closure Plan Modification for MacDermid Incorporated Hazardous Waste Storage Areas* prepared by Loureiro Engineering Associates, Inc., dated September 2002 as revised on October, 2002, December 2002, and with revisions dated January 24, 2003 and March 7, 2003 (“the Closure Plan”).

2.0 HAZARDOUS WASTE HISTORY

The hazardous waste storage area (HWSA) that is the subject of this closure report (i.e. Area E – the former metal hydroxide / sulfide sludge storage area) is one of five HWSAs on the site. According to the Closure Plan:

“Dewatered metal hydroxide/sulfide sludge (F006) was generated from MacDermid’s industrial wastewater treatment system and stored on-site in the Metal Hydroxide/Sulfide Sludge Storage Area, as depicted on Figure 6. The sludge was stored in a 30 cubic yard polyethylene lined roll-off which was housed in a 600-square foot storage building located at the southern side of the Huntingdon Avenue Building and east of the bulk loading/unloading area. Secondary containment in this area is provided by the interior and exterior concrete walls, a 4” berm and a floor trench that discharged directly to the on-site wastewater treatment system. Formerly, the metal hydroxide/sulfide sludge was discharged from the on-site wastewater treatment system to two 3,200-gallon holding tanks located in the regulated unit. The semi-liquid sludge was then transferred to a filter press, which discharged dewatered sludge directly into the 30 cubic yard lined roll-off. Once full, the roll-off was shipped to a permitted facility for final treatment and disposal.”

The Closure Plan reported information reviewed during a 1993 historical environmental investigation indicated approximately 200-cubic yards of metal hydroxide sludge was generated in Area E annually.

3.0 CONSTITUENTS OF CONCERN & MEDIA CLOSURE CRITERIA

Constituents of Concern (COC) are defined as those hazardous constituents which are listed in 40 CFR Parts 261 Appendix VIII and which could be present at a regulated unit as residual contamination or degradation products of residual contamination. The

Closure plan acknowledges that identification of all possible Appendix VIII constituents is difficult at the MacDermid facility based on the number of chemical compounds used historically at the MacDermid facility. The Closure Plan included specific Appendix VIII parameters on the COC list for the MacDermid facility based on a review of site specific records including:

- Hazardous Waste Reports,
- Raw Materials List,
- Hazardous Waste Manifests,
- Part B Permit and permit renewal applications,
- Groundwater monitoring parameters.

The following COCs were identified in the Closure Plan specifically for Area E at the MacDermid facility:

- Cadmium
- Chromium (III) total,
- Hexavalent Chromium,
- Nickel,
- Cyanide.

This list includes the specific COCs that may have been managed in this HWSA based on facility records. However, to assist in identifying all possible hazardous waste constituents that may have impacted Area E, concrete chip samples were collected and analyzed for Appendix IX constituents. Results from Appendix IX sampling were provided to Charter Oak with file information regarding MacDermid Inc., and are presented as Appendix B.

Taking into account the COCs listed in the closure plan and the results of the Appendix IX analyses, volatile organic compounds (VOCs) were added as part of the analytical list for Area E closure activities.

The site is now and has been historically used for industrial purposes. It is our understanding that an Environmental Land Use Restriction (ELUR) will be imposed on the site, limiting it to industrial and commercial (I/C) land uses. Therefore, considering land use, local ground water classification, and the COC list, the media closure criteria, as specified in the Closure Plan for the HWSA concrete and soil, are the I/C direct exposure criteria (IDEC) and the GB Pollutant Mobility Criteria (GBPMC).

4.0 STORAGE AREA EQUIPMENT DECONTAMINATION AND REMOVAL

The Closure Plan proposed using a combination of pressure washing, scarification, or a similar decontamination process for the equipment (primarily tanks and associated piping). The Closure Plan described using abrasive techniques to remove any remaining staining after power washing tasks were completed. All rinseates were to be

containerized and characterized. The Closure Plan called for sample locations for the decontaminated equipment to be determined both randomly and judgmentally. For tank systems the Closure Plan described removing all residues from the tank systems, and removal of ancillary equipment connected to the tank systems. Unfortunately, specific written documentation of equipment decontamination and removal has not been located due to a change of MacDermid personnel. Reportedly, the plan was implemented as presented for decontamination and removal of equipment. Charter Oak understands that equipment disposition was a combination of re-use/recycling and disposal. Charter Oak can verify that equipment is removed from the storage area and the site. Charter Oak cannot verify that the decontamination protocols were implemented as specified in the Closure Plan. General observations of waste and scrap management practices at the facility suggest that this equipment was appropriately managed.

5.0 STORAGE AREA STRUCTURE SAMPLING

The Closure Plan required decontamination, but not necessarily removal of structures. The decision was made to remove and dispose of structures beyond the scope of the closure plan, eliminating the need to decontaminate and document decontamination.

On October 5, 2007 EQ Northeast began demolition of the exterior structure. EQ subcontracted portions of the demolition tasks to CRS, of Chesire, Connecticut. CRS, a Hazwoper demolition specialist, obtained a class B permit through the City of Waterbury to conduct demolition operations. Exterior building demolition was completed by October 7, 2008. EQ Northeast continued concrete floor demolition through October 11, 2008. Concrete rubble was loaded into roll-off boxes and composite concrete chip samples were collected for disposal characterization (Appendix C). Scrap metal from Area E demolition was inspected and loaded into 30 yard roll off containers and transported to the Albert Brothers Inc. scrap yard in Waterbury, Connecticut.

6.0 STORAGE AREA BUILDING FOOTPRINT SOIL SAMPLING

Exceeding the scope of the Closure Plan, the media closure criteria in soils was met prior to backfilling, to minimize the possibility of additional remediation of this area under RCRA Corrective Action activities. On November 11, 2007 12 grab soil samples were collected within the former building footprint. Soil sample results are presented in Geolabs report #0710194 (Appendix C). Soil sample results are summarized and presented in Table 1. No samples were submitted for SPLP analysis from the November 11, 2007 sample event. Charter Oak simulated SPLP results by dividing the total metals results by twenty. Some of the simulated SPLP data exceeded the GB PMC, however simulated results typically are higher than actual SPLP data (Table 1). Figure 1 shows the initial confirmation soil sample locations within the Area E building footprint.

Based on results from the November 11, 2007 soil samples, Charter Oak recommended the removal of additional soils from the Area E excavation. On December 4, 2007 EQ Northeast excavated an additional 60 tons of soils from Area E. Area E excavation material was staged on poly sheeting pending shipment as hazardous waste to Envirite in

York, Pennsylvania. Shipping manifests from soils shipped to Envirite are presented in Appendix H.

Additional exterior soils samples were collected in order to provide confirmation of conditions following additional excavation activities at Area E. The majority of the samples were collected on April 30, 2008. Due to standing water present in the excavation in the location of S8 and S10 on April 30th, these locations were subsequently sampled on May 21, 2008. Total Chromium results reported for samples S1-403008, S2-043008, S6-043008, and S8-043008 were at or exceeding 100 mg/kg, therefore hexavalent chromium analysis (see Appendix E & F) was performed. Results from hexavalent chromium analysis was reported by CET for all Area E additional soil samples to be well below the IDEC limit of 100 mg/kg (see Table 2). Additional SPLP samples were collected on August 12, 2008 at locations where simulated SPLP results had exceeded the GB PMC (Table 1). Results from the additional SPLP analysis confirmed that actual SPLP metals concentrations were lower than simulated results and met compliance with the GB PMC (Appendix G). All other Analytical laboratory test results reported by CET for additional soil samples collected in the Area E excavation are well below the IDEC or the GB PMC and are presented in Table 3. Additional confirmation closure sample locations are displayed in Figure 2. Media Closure Criteria soils sample locations and sample results are presented in Figure 3 and Table 3.

Charter Oak determined that Area E met the closure objectives and was ready for backfilling. Backfill was supplied by O&G of Waterbury, Connecticut. A characterization sample of the backfill material was collected on June 9, 2008 and submitted for analysis. The analytical laboratory report, Geolabs #0806171, indicated the backfill is consistent with the MCC, and is presented as Appendix I.

7.0 DEPARTURES FROM CLOSURE PLAN

Actual site operations associated with the closure of Area E differed from the Closure Plan in the following ways:

- The Closure Plan called for the decontamination of the floor surface, whereas the entire concrete floor and building structure was removed for off-site disposal.
- Upon removal of the floor, sub-surface soil sampling led to the excavation and removal soils within Area E so that the soils remaining in the excavation base met the MCC.
- Documentation of the equipment decontamination and disposition of equipment described in the Closure Plan was not located. However, removal of the equipment and building structure from the site was verified in the field.
- These departures from the closure plan are considered to be acceptable for purposes of certification.

8.0 CONCLUSIONS & CLOSURE CERTIFICATION

The objective of the closure was complete the tasks described in the closure plan. Additional tasks were also performed so that the area would not need to be revisited during RCRA corrective action. Additional tasks performed include removal of the building structure, floors, subsurface structures, and soil above the MCC within the Area E footprint. Subsequent backfilling was also performed. The following tasks were completed to fulfill these objectives.

- Equipment has been removed from the site.
- The underlying structure (concrete floor) has been removed and transported off-site.
- Imposition of a land use restriction prohibiting residential use should be completed in support of the selection of the I/C DEC and the applied media closure criteria.
- Building structures from Area E have been removed and transported off-site.
- Soils within the foot print of the storage area meet the media closure criteria (Table 3).
- Area is backfilled to grade.
- Closure objectives and the additional objectives have been met.

**CLOSURE CERTIFICATION
FOR
RCRA HAZARDOUS WASTE STORAGE AREA E**

*MacDermid, Inc.
526 Huntingdon Avenue
Waterbury, Connecticut*

EPA ID No. CTD001164599

Pertinent Documents:

1. CLOSURE PLAN MODIFICATIONS FOR MACDERMID INCORPORATED HAZARDOUS WASTE STORAGE AREAS, dated September 2002 as revised October, 2002, December 2002, and with revisions dated January 24, 2003 and March 7, 2003. Prepared by Loureiro Engineering Associates, Inc.
2. Section IIA, Stewardship Permit # DEP/HWM/CS-151-001, September 28, 2007.
3. CLOSURE REPORT AND CERTIFICATION, HAZARDOUS WASTE STORAGE AREA E. Prepared by Charter Oak Environmental Services, Inc. Issued December 2008, as revised January 2009.

In conformance with the methods presented in the documents listed above, the following activities were completed:

1. Dismantling, removal and management of equipment and infrastructure associated with Area E; and
2. Removal and management of concrete from within the footprint of the storage area;
3. Removal and management of soils that were below the concrete floor, so that remaining soils meet the MCC.
4. Partial backfilling of excavation.

The undersigned hereby certify that these specific closure activities, pertaining to the former location of AREA E at MacDermid, Inc. facility Waterbury, Connecticut have been completed.

* There is no established Connecticut RSR I/C DEC for total Chromium therefore the hexavalent chromium I/C DEC of 100 mg/kg was applied.

[^] Sample S13 was collected at the same location as sample S12 at a greater depth below grade.

Notes:

1. No SPLP data was collected. Total metals results were divided by 20 to simulate maximum possible SPLP result. Actual SPLP data is typically somewhat lower.

2. ND means not detected.

3. NA means SPLP results were not simulated because total metals analysis for respective constituents was reported as non-detect.

4. **BOLD HIGHLIGHTED** values exceed IC DEC (as expressed in mg/kg column)

5. **BOLD HIGHLIGHTED** values exceed GB PMC (as expressed in mg/L column)

* No actual SPLP data was collected. Total metals results were divided by 20 to simulate maximum possible SPLP result. Actual SPLP data is typically somewhat lower.

[^] Sample location S13 represents data collected at the location of samples S13 and S12-082108.

Notes:

1. I/C DEC means Industrial/Commercial Direct Exposure Criteria.
2. GB PMC means Pollutant Mobility Criteria for Class GB Groundwater.
3. ND means not detected.
4. NA means not analyzed.
5. NA/20 means total metals result is non detect and the detection limit divided by 20 is less than the GB PMC.

6. **BOLD HIGHLIGHTED** values exceed IC DEC (as expressed in mg/kg column)

7. **BOLD HIGHLIGHTED** values exceed GB PMC (as expressed in mg/L column)

TEL: (508) 384-6151
FAX: (508) 384-6028

Project: 1500471
Location: Macdermid CT

Order No.: 0710474

Dear Peter Long:

GeoLabs, Inc. received 2 sample(s) on 10/31/2007 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications except where noted in the Case Narrative.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Jim Chen
Laboratory Director

Certifications:

CT (PH-0148) - MA (M-MA015) - NH (2508) - NJ (MA009) - NY (11796) - RI (LA000252)

CLIENT: EQ Northeast
Project: 1500471
Lab Order: 0710474

CASE NARRATIVE**Physical Condition of Samples**

The project was received by the laboratory in satisfactory condition. The sample(s) were received undamaged, in appropriate containers with the correct preservation.

Project Documentation

The project was accompanied by satisfactory Chain of Custody documentation.

Analysis of Sample(s)

All extractable samples were extracted and analyzed and any Volatile samples were analyzed within method specified holding times and according to GeoLabs documented Standard Operating Procedure.

The following analytical anomalies or non-conformances were noted by the laboratory during the processing of these samples:

8260 LCS percent recovery for Naphthalene is outside the recovery limits.

8270 Method Blank percent recovery for 2,4,6-Tribromophenol is outside the recovery limits.

8270 LCS percent recoveries for 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 2,4-Dinitrophenol, Pentachlorophenol, and 2,4,6-Tribromophenol are outside the recovery limits.

E values are reported on Volatile results for Sample 001.

Wrentham, MA 02093

TEL: (508) 384-6151
FAX: (508) 384-6028

Project: 1500471
Location: Macdermid

GeoLabs, Inc.
45 Johnson Lane
Braintree MA 02184
Tele: 781 848 7844
Fax: 781 848 7811

Order No.: 0710194

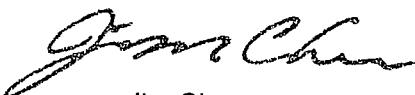

Dear Peter Long:

GeoLabs, Inc. received 13 sample(s) on 10/16/2007 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications except where noted in the Case Narrative.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Jim Chen
Laboratory Director

Certifications:

CT (PH-0148) - MA (M-MA015) - NH (2508) - NJ (MA009) - NY (11796) - RI (LA000252)

CLIENT: EQ Northeast
Project: 1500471
Lab Order: 0710194

CASE NARRATIVE**Physical Condition of Samples**

The project was received by the laboratory in satisfactory condition. The sample(s) were received undamaged, in appropriate containers with the correct preservation.

Project Documentation

The project was accompanied by satisfactory Chain of Custody documentation.

Analysis of Sample(s)

All extractable samples were extracted and analyzed and any Volatile samples were analyzed within method specified holding times and according to GeoLabs documented Standard Operating Procedure.

The following analytical anomalies or non-conformances were noted by the laboratory during the processing of these samples:

8260 LCS percent recoveries for Acrylonitrile and Naphthalene are outside the recovery limits.

GeoLabs, Inc.

Project: 1500471
Location: Macdermid Centfield Clean

Order No.: 0806171

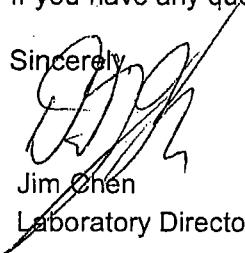

Dear Peter Long:

GeoLabs, Inc. received 1 sample(s) on 6/10/2008 for the analyses presented in the following report.

This is a preliminary report that contains incomplete data or data that has not been fully validated. Caution should be exercised in the use of any data presented as final reported results may not reflect the values presented.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Jim Chen
Laboratory Director
